

Educational Duct Tape

Educational Technology Professional Development

Helping educators see EdTech as tools to meet goals, address learning standards & solve problems.

During this day-long professional development, educators will be introduced to Jake's edtech decision-making strategy: *Educational Duct Tape*. In the engaging presentation portion of the workshop, they will learn how technology in the classroom is much like duct tape: using it should not be the goal of a lesson, but a tool used to meet a goal, address a learning standard or solve a problem.

After learning about some of the ways that Jake has met goals and solved problems through the use of edtech, the educators will have about half of the day to collaborate with Jake and the other attendees to make plans for putting their own tools, solutions and strategies into place for their own classrooms.

Motivated educators will leave with plans, ideas and strategies ready to put into place immediately!
